

# MNQ/MES DBP Morning Filter Router

Research brief - current best demo candidate, not paid-eval automation ready

## Bottom Line

This is the current best anchor in the prop-firm lab. It preserves the 608-row detector-ready hierarchical opening-structure portfolio, then removes 52 DBP open-drive reclaim rows from the 08:00-08:59 source entry bucket. The rule is pre-entry and detector-implementable. Paid evaluation automation remains blocked until fresh live data, one fresh accepted signal, and one supervised paper bracket are proven.

| Trades | Win   | Net R   | Expectancy | PF   | Max DD | Frequency |
|--------|-------|---------|------------|------|--------|-----------|
| 556    | 60.8% | +213.0R | +0.383R    | 2.06 | 5.63R  | 3.56/wk   |

## Prop-Firm Governor Comparison

| Profile      | Risk  | Locks          | Max trades | 44d pass/fail  | 66d pass | Median/p75 | Funded60 |
|--------------|-------|----------------|------------|----------------|----------|------------|----------|
| Safe/default | \$400 | \$800 / \$350  | 4/day      | 74.33% / 6.29% | 88.09%   | 26d / 38d  | 98.69%   |
| Eval A/B     | \$450 | \$1000 / \$500 | 2/day      | 78.88% / 8.65% | 88.21%   | 23d / 34d  | 98.57%   |

## Launch Gate

Research, no-leak review, detector patch, provider replay, synthetic bracket dry-run, and real-detector bracket-lab checks are ready. The current launch gate is NO-GO for paid evaluation because current live data is not loaded, no fresh accepted live signal has been captured, and no supervised paper bracket has been sent.

## No-Leak Statement

The promoted filter uses only candidate identity and pre-entry source entry minute. It explicitly rejects MAE, MFE, net R, gross R, result, hold minutes, and outcome-derived positive/negative regime suffixes as entry filters.
